Professional Summary

Linux & AIX System Administrator with over 4+ year experience in server administration, troubleshooting, user management, LVM, patching, backup & recovery, and automation using Bash scripting and ansible. Hands-on exposure to IBM Power Systems, LPARs, VIOS, AIX administration, and Linux environments (RHEL, CentOS). Basic knowledge of AWS Cloud services including EC2, S3, IAM, VPC, and CloudWatch. Strong understanding of incident management, change management, server hardening, and system performance monitoring.

EDUCATION

Bachelor of Technology: Information Technology

Dr. A.P.J. Abdul Kalam Technical University

Sep 2021

Greater Noida, Uttar Pradesh

SKILLS

Operating System: Linux RHEL 6.x/7.x/8.x, AIX (Basic)

Storage & File Systems: LVM, NFS, VIO, LPAR Management

Automation & Scripting: Ansible, Bash shell Scripting, CI/CD Pipelines in GitLab, Cron Job

Ticketing tools: ESP, ServiceNow, Jira

Networking & Security: DNS, FTP

Mail Messaging Server: Send mail, Postfix

Virtualization & Config Management: Docker (beginner), RedHat Satellite

Cloud Technologies: AWS (EC2, IAM, S3, EBS, VPC)

EXPERIENCE

Linux System Administrator

TATA CONSULTANCY SERVICES

Dec 2021 – Current

Kolkata

- Administered and supported Linux (RHEL, CentOS) and AIX servers.
- Performed OS installation, configuration, patching, and upgrades.
- Managed IBM Power Systems, LPARs, and VIOS environments.
- Handled user account management, permissions, and security compliance.
- Managed LVM, filesystem expansion, disk administration, and storage allocation.
- Performed server health checks, troubleshooting, and performance tuning.
- Worked on server hardening and vulnerability remediation activities.
- Coordinated with application teams during deployments and maintenance activities.
- Automated administrative tasks to reduced manual effort using Bash scripting and Ansible.
- Monitored system performance using Linux and AIX monitoring tools.
- Followed ITIL processes including Incident, Problem, and Change Management.
- Administered Linux servers, ensuring optimal performance and security configurations.
- Reduced manual operational effort through ansible automation

PROJECTS & AUTOMATION

- Assisted in monthly OS patching activities across Linux
- Developed automated health check scripts for Linux servers using bash shell script and ansible.
- Automated monthly AIX server backups using the mksysb utility through Shell Scripting and Cron scheduling.

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)
